

Implementing the 2030 Agenda in Mexico

**John Scott,
CIDE, CONEVAL**

(adapted from Gonzalo Hernández Licona, CONEVAL)

**Inter-Agency Expert Group Meeting in support of the
the Third United Nations Decade for the Eradication of Poverty (2018–2027)**

United Nations Economic Commission for Africa ■ Addis Ababa

18-20 April 2018

Implementing the 2030 Agenda in Mexico: *A natural experiment*

- First country to introduce a **multi-dimensional measure as a national poverty measure (income + social dimensions)**. Developed by CONEVAL, an autonomous technical institution created by Congress through the General Law for Social Development (2004). Measure was motivated as a **guide for the allocation of public resources and design of social programs** sensitive to each of these dimensions and their interaction.
- Since 2012 it has been used to **target and coordinate multi-dimensional, inter-agency and inter-government (federal, state, municipal) social development strategy, *Nacional Inclusion Strategy (ENI) (National Crusade against Hunger: CNCH)***. Also **pioneering integral CCT strategy: Progresa/Prospera CCT**.
- The 2030 Agenda (2017) can be implemented in Mexico in part through the natural **alignment of this measure and strategy to the SDGs**.

The 2030 Agenda and multi-dimensional conception (measurement) of development

- The 2030 Agenda covers unfinished issues from the MDGs, beyond aggregate poverty eradication: Leave no one behind (Starting with measurement).
- The SDGs hold tight links amongst each other, calling for integral, coordinated, multi-disciplinary measurement and implementation in order to achieve them.
 - Normative: fuller concept of human success
 - Normative interactions
 - Causal interactions
 - Institutional interactions (coordination vs silos)

2030 Agenda: Challenges

Political agreement

No step-by-step
handbook on
implementation

This general
agreement doesn't
reflect the diagnosis of
any single country.

Requires immense
amount of
coordination across
sectors

Trying to handle 169
targets and 232
indicators may
become a
bureaucratic exercise

Technically
challenging to
measure all indicators

Countries have ongoing development strategies: Should they start from scratch?

Indicators challenges

17

Sustainable
Development Goals

169

Targets

232

Unique Indicators

93 -Conceptually clear, established methodology and standards, available data regularly produced by countries

66 -Conceptually clear, established methodology and standards, available data but not regularly produced by countries

68 -Indicators for which there is no established methodology or it's being developed.*

LAC countries only produce 22% of the indicators contained in the global indicator framework for the 2030 Agenda (ECLAC, 2017).

Country specific challenges: SDGs + National Indicators

- Some countries, such as Mexico, will not only monitor the 2030 Agenda through the 232 unique indicators in the Global Indicator Framework, but will also **generate national indicators** using local sources of information & methodologies: National monitoring strategies.
- How to make SDGs compatible with national priorities, indicators and unique path to development?

Mexico and the 2030 Agenda

What has been done?

- Mexico **began** incorporating the 2030 Agenda towards the **end of 2015**.
- The President's Office **identified which SDGs were aligned with the National Development Plan**
- The **President's Office began working on a strategy for advising local governments** on how to incorporate SDGs into their policies
- A **National Council** for the 2030 Agenda on Sustainable Development was set in place during 2017
- The President's Office, in a joint effort with all key stakeholders, has created an **initial draft** for the National 2030 Agenda Implementation Strategy

Going forward..

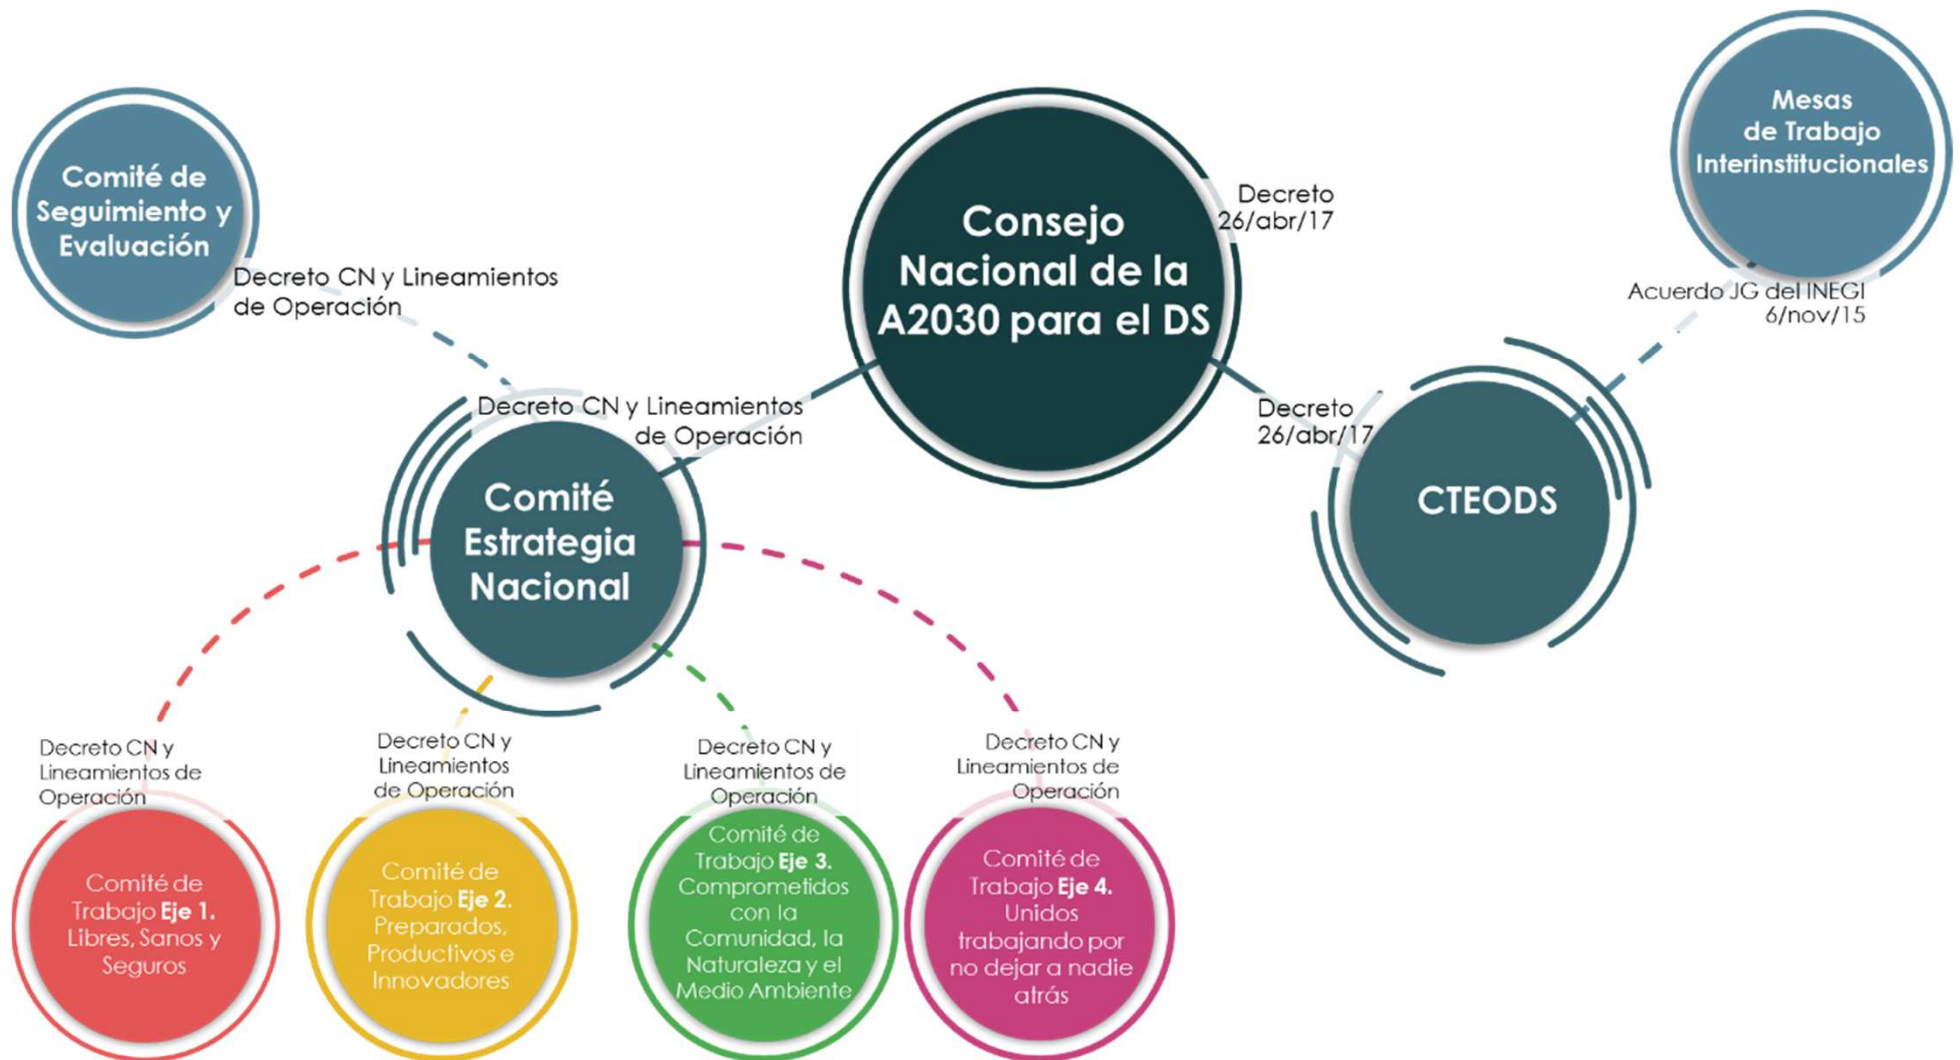

- Mexico is still in the *implementation-design* stage
- **How should Mexico go about the implementation to assure effective results?**
 - **Prioritize** according to national mandates
 - **Coordinate** levels of government and strategies
- Follow up: **monitoring and evaluation**
- **Institutional Challenges:** vertical and horizontal coordination, new bureaucracies...
- New administration: **2018 election**

Development and SDGs as a bowling strategy: Priorities and interlinkages

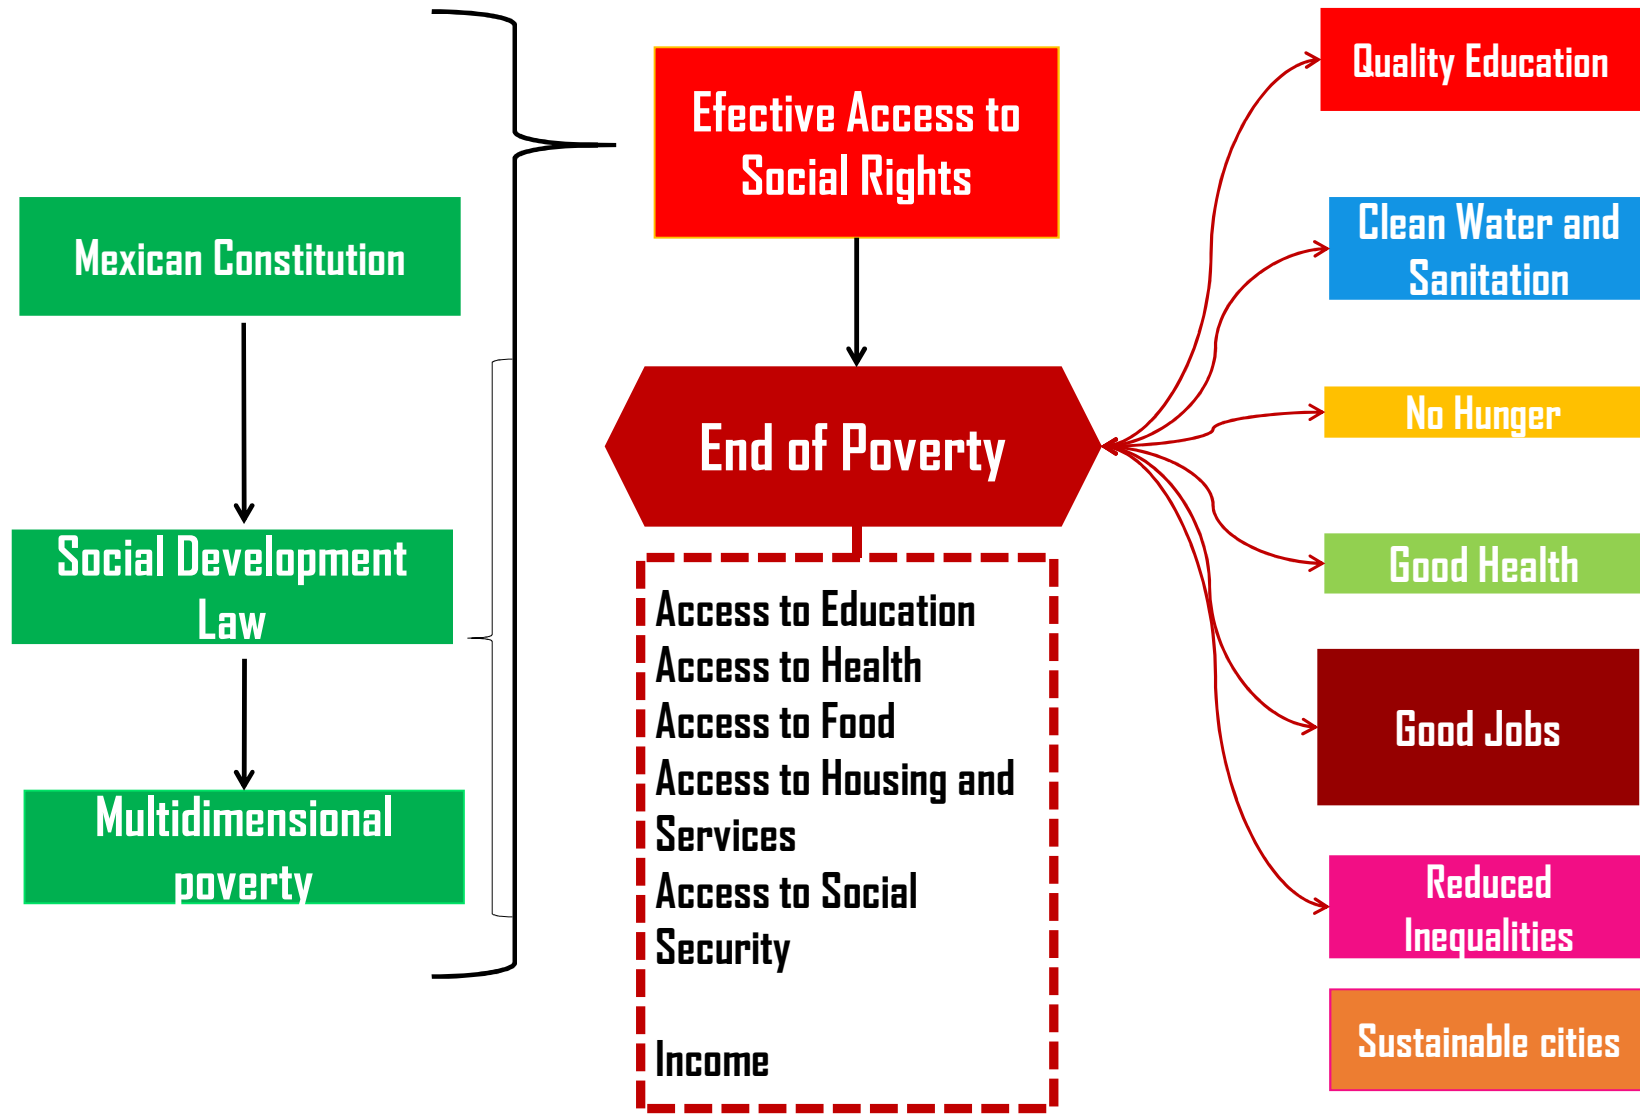

THE PERFECT STRIKE

Comitee structure A2030

Development Priorities: Multidimensional poverty strategy.

Multidimensional poverty measure (CONeVAL) as a guide to social policy

- **Targets, measures and evaluation**

- Multidimensional guide to social (en economic) policy: targeting by dimensions and population groups
- Identifies vulnerable as well as poor

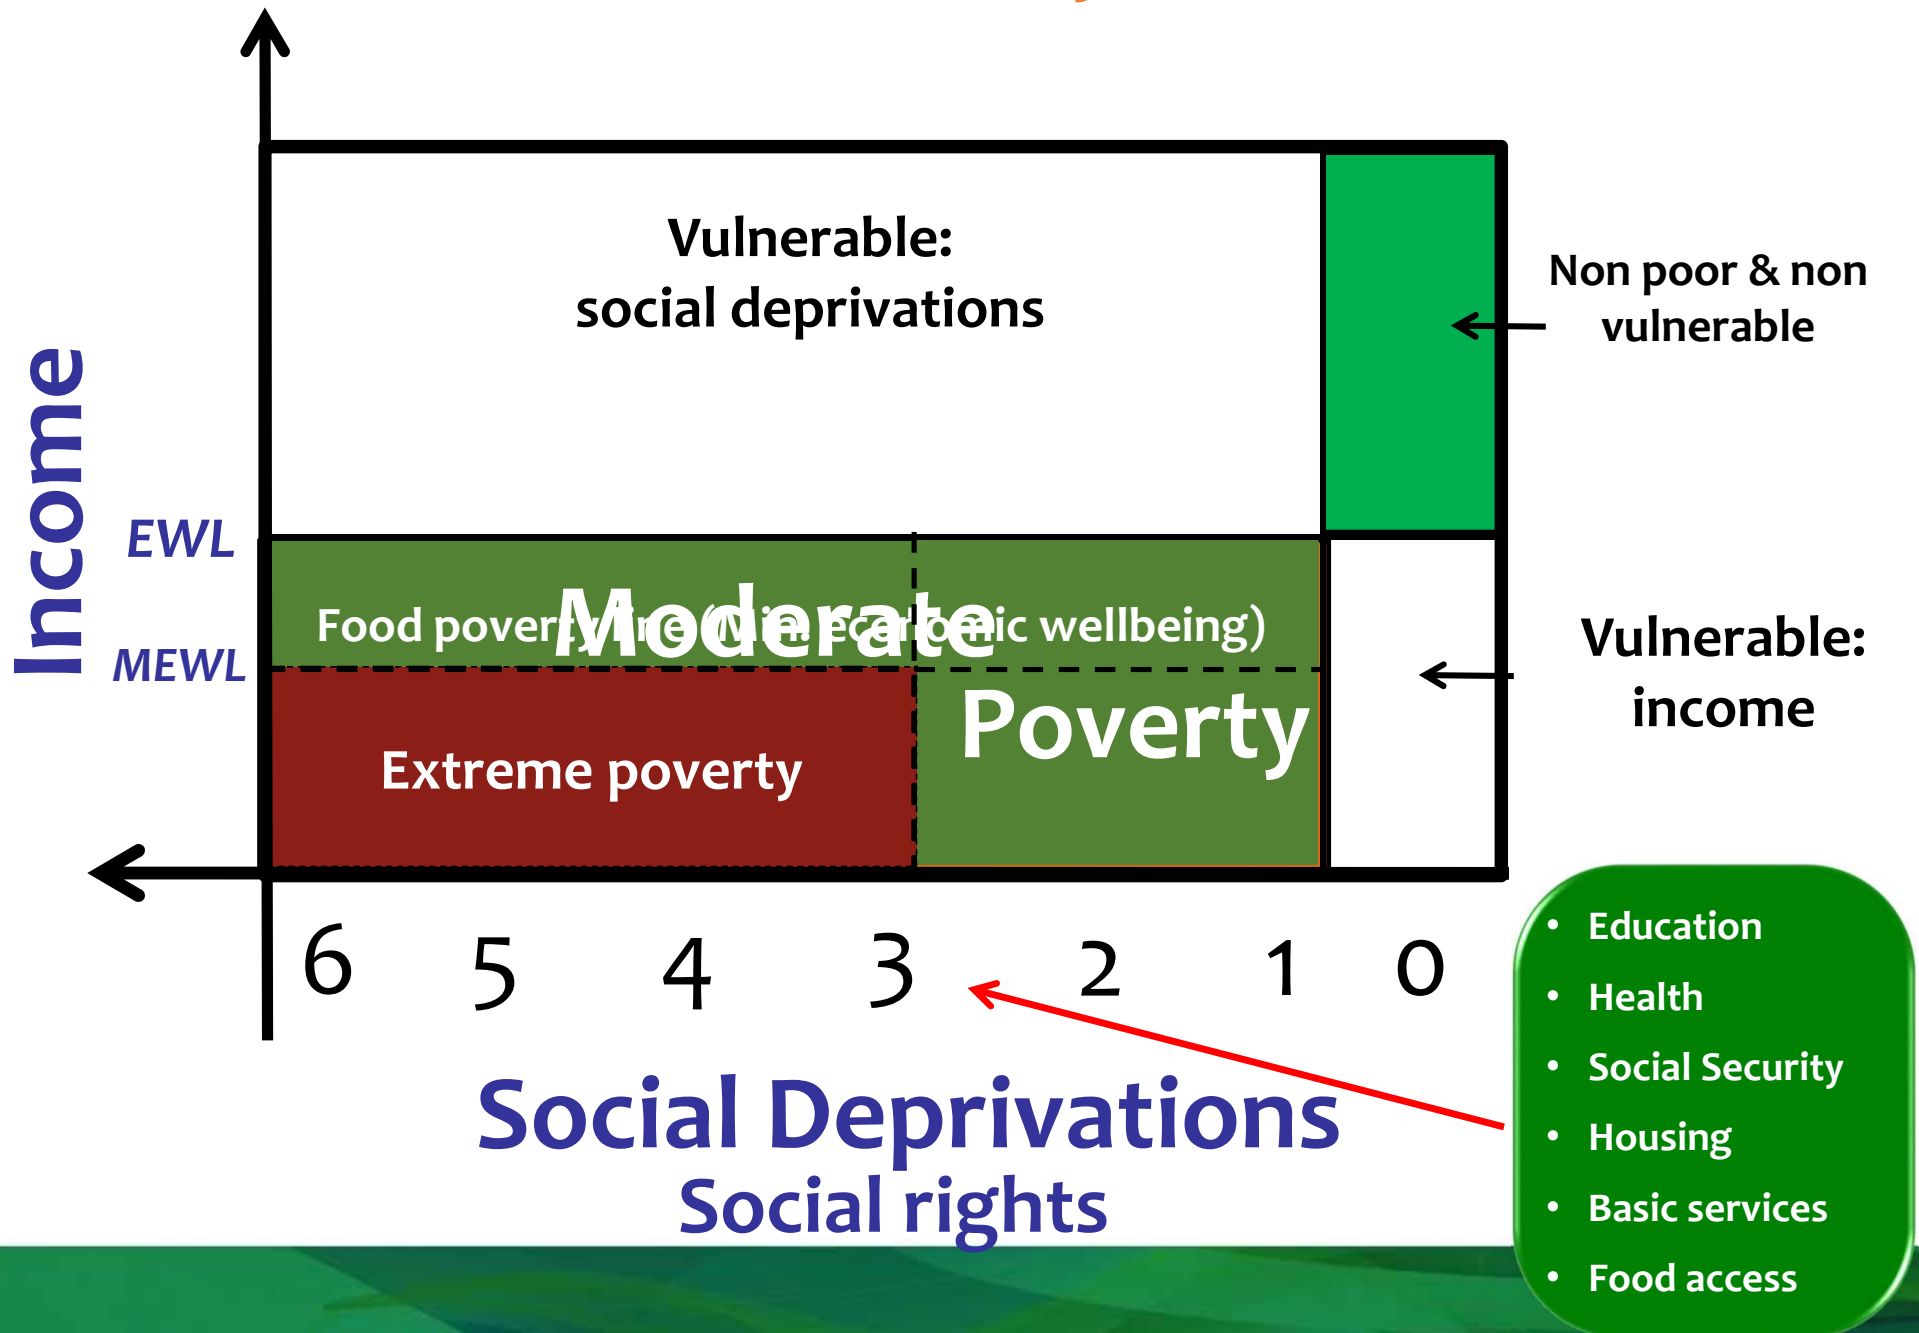

- **Nacional Inclusion Strategy (ENI), *National Crusade against Hunger***

- Targeted sectoral and government (federal, state, local) coordination of social programs to ensure access to social services guided by poverty measure and effectively: contributed to poverty reduction 2014-2016

- **Challenges**

- Poverty measurement not designed to reflect all social priorities and complexity of social problems
- Data constrained: HH surveys, Population census; cannot measure effective access, quality of services, etc.
- “Optimal targeting” may leave the poorest of the poor behind

Poverty Measurement

Mexico's multidimensional poverty measure and SDG's

Mexico's multidimensional poverty measure offers an effective entry point to the 2030 Agenda (TARGET 1.2)

Poverty indicator decomposable by groups

Evolución de la población en pobreza en materia de carencias sociales

1990-2016
Porcentaje

Fuente: Los datos anteriores a 2008 son de los Censos de Población y Vivienda 1990 y 2000 y del Censo de Población 2005; los datos de 2008 a 2014 son del Módulo de Condiciones Socioeconómicas y para 2016 se usó el MEC 2016 del MCS-ENIGH.

Income poverty 1992-2016

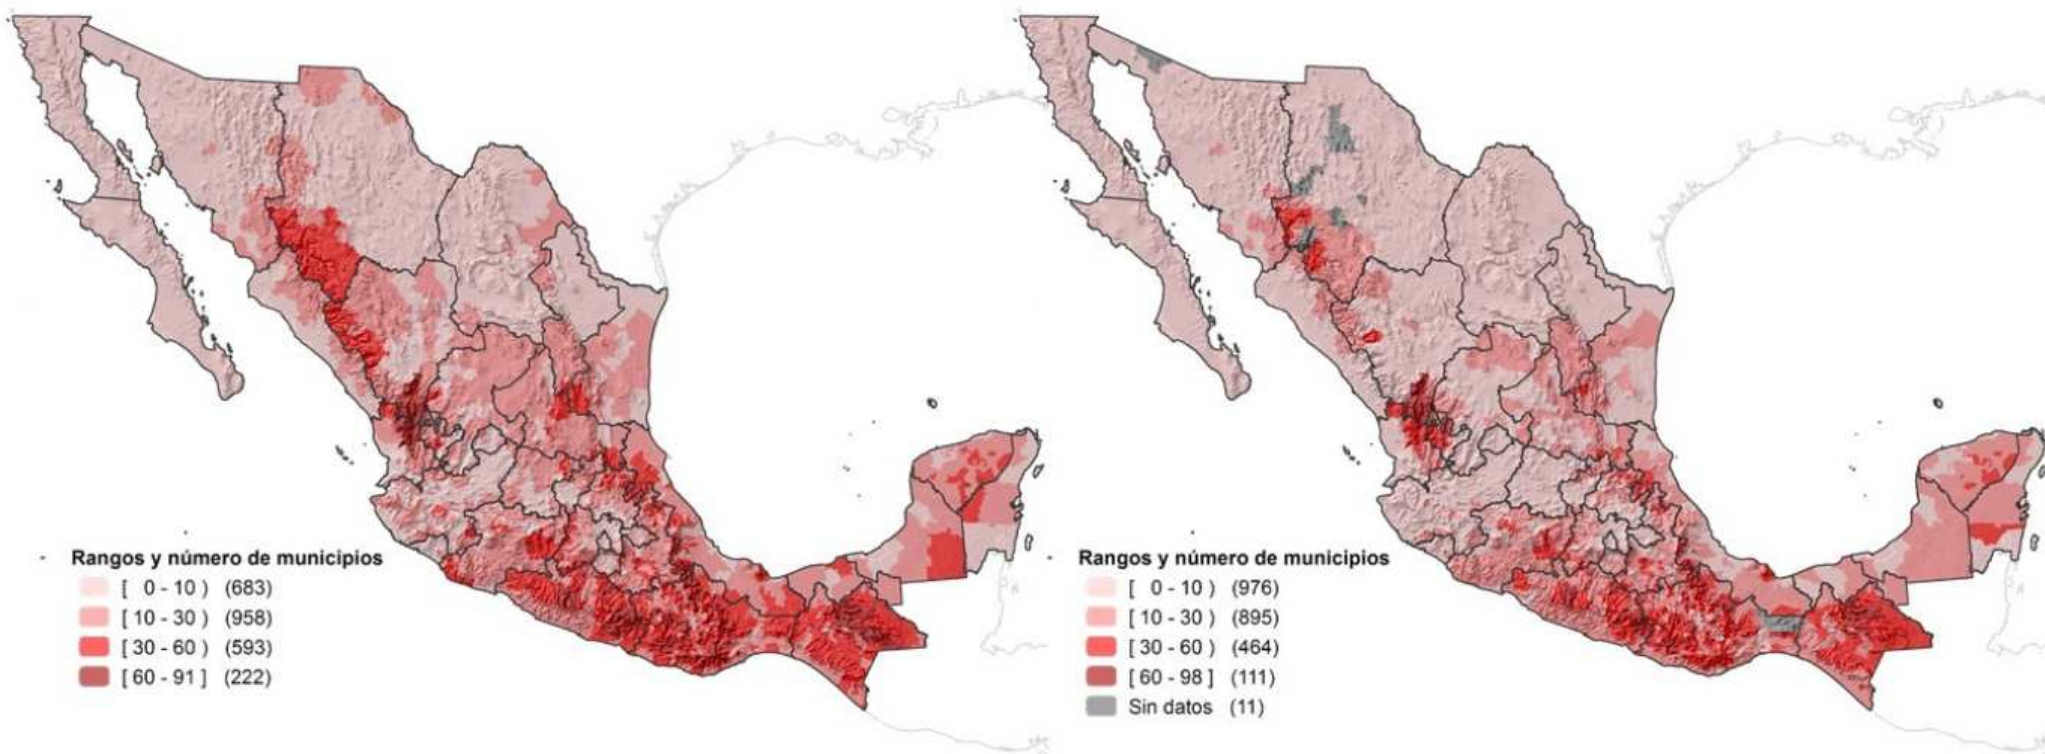

Poverty: states, 2016

Poverty: municipalities, 2010-2015

2010

2015

Poverty: Rural vs. Urban

Fuente: estimaciones del CONEVAL con base en el MCS-ENIGH 2010, 2012, 2014 y el MEC del MCS-ENIGH 2016.

*Se definen como localidades rurales aquellas cuya población es menor a 2,500 habitantes.

Poverty: Indigenous vs. Non-Indigenous

Fuente: estimaciones del CONEVAL con base en el MCS-ENIGH 2012, 2012, 2014 y el MEC del MCS-ENIGH 2016.

*Por condición de habla de lengua indígena

Poverty: rural indigenous females vs. urban non-Indigenous males

Fuente: estimaciones del CONEVAL con base en el MCS-ENIGH 2010, 2012, 2014 y el MEC del MCS-ENIGH 2016.

*Se define a la población indígena por condición de hablante de lengua indígena. Se definen como localidades rurales aquellas cuya población es menor a 2,500 habitantes.

Main challenges going forward: integrating SDGs with national priorities in a coherent national strategy...

- **Universal Social Protection.** Despite progress in coverage of non-contributive programs (Seguro Popular, Adultos Mayores), coverage and benefits still very unequal.
 - Universal basic income.
- **Productive inclusion: Prospera (Progresá, Oportunidades) CCT Program.** Effective HK investment, recent initiative to promote productive, labor and financial inclusion. Availability of relevant programs limited.
- **Quality of education**
- **Building coordinating capacities**

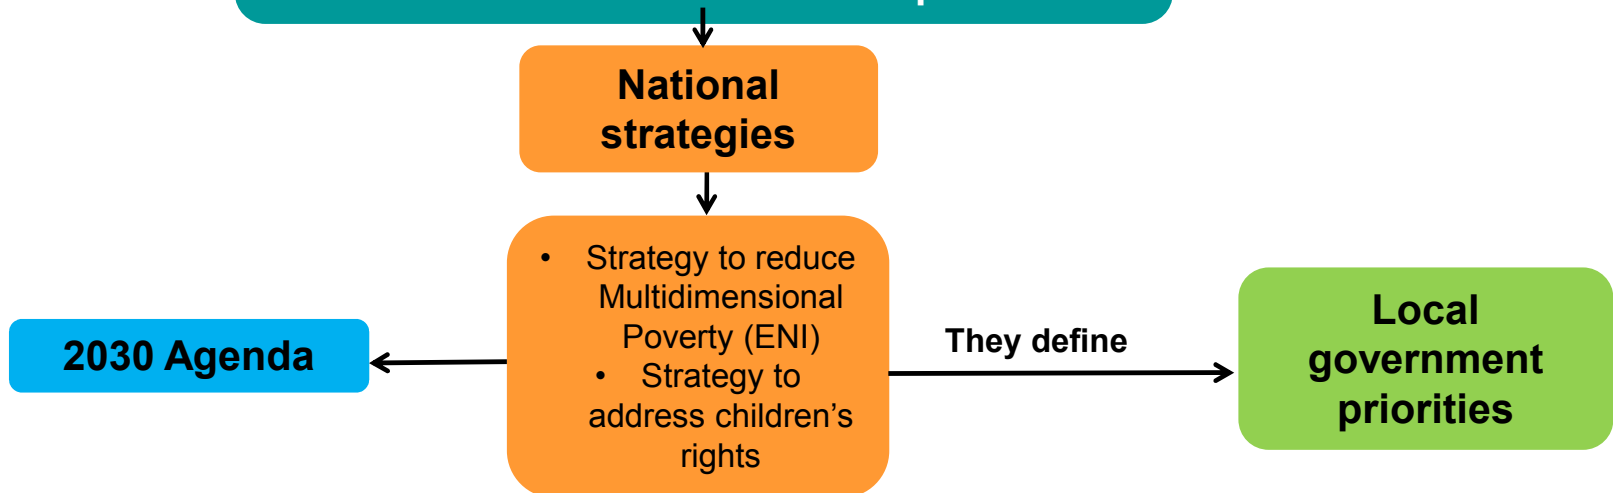

Coordinating SDG Efforts in Mexico

In order to achieve the 2030 Agenda, **coordination** amongst a wide range of Mexican stakeholders will be required.

Coordination challenges:

- Stakeholders only look after their own interests: silos effect
- Institutions are already in an operational overdrive
- Operations tend to become bureaucratic processes
- Some goals come to a loss for others, importance of establishing priorities

Solution: Use coordination strategies that are already in place, improve them and enhance them to include SDG operations.

Leave no one behind

Thank You
